

Tutorial 12: Programming with AJAX

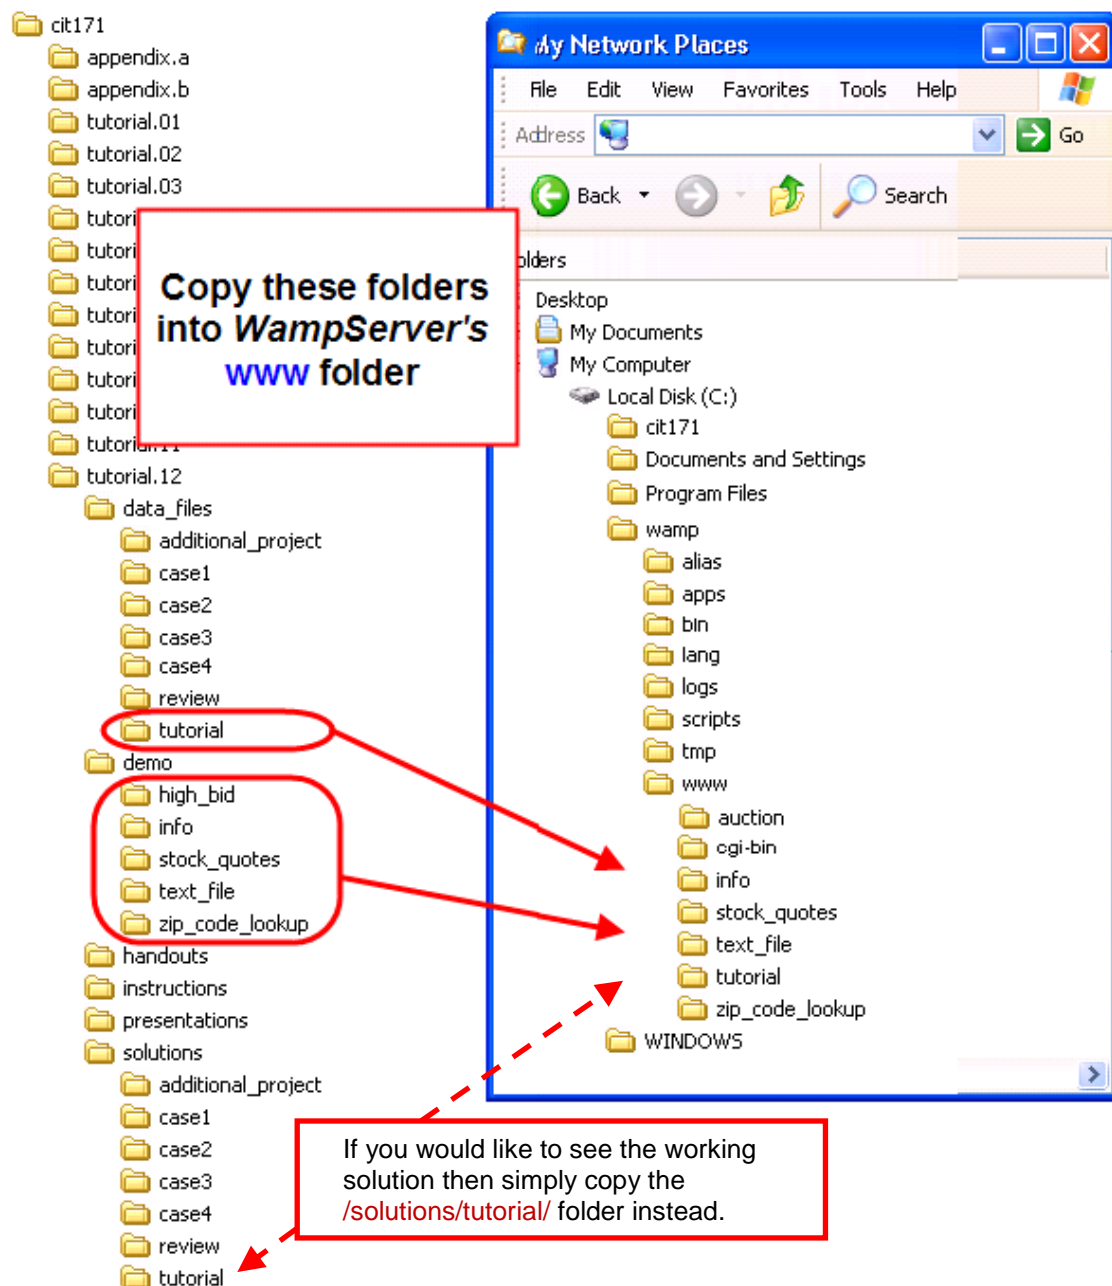

Before You Begin

A. Install WampServer

1. Follow the steps in Blackboard's [WampServer installation instructions](#)

B. Copy the **tutorial** folder into *WampServer's* **www** folder

1. Copy the *Tutorial 12* **tutorial** and **demo** folders into the **C:\wamp\www** folder as shown below:

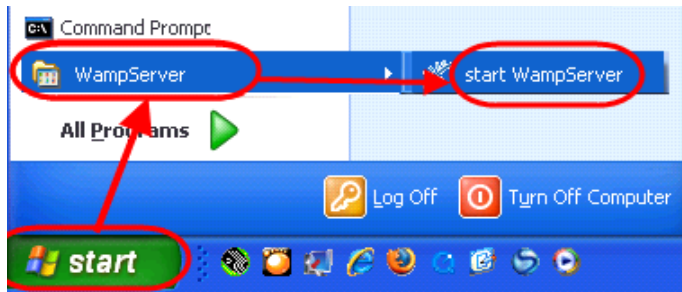

C. Install Perl

1. Follow the steps in Blackboard's [Perl installation instructions](#)

D. Must Do's in Tutorial 12

1. Only edit the *Tutorial 12* files in the **C:\wamp\www\tutorial** folder.
2. Make sure *WampServer* is turned on when you are working on Tutorial 12

If you haven't already installed *WampServer*, please see Blackboard's [WampServer installation instructions](#)

3. Only view the *Tutorial 12* Web page using the address <http://localhost/tutorial/sblogger.htm>.

This Web page can also be viewed on the CLC Web server at http://www.clcwebserver.com/cit171/course_files/tutorial.12/solutions/tutorial/sblogger.htm

E. Problems?

If you are unable to get WampServer or *Perl* to work correctly you can always upload your *Tutorial 12* tutorial to the CLC Web server and test it there. You do not need to upload the [sbarchiives.cgi](#) or [sbkeywords.cgi](#) script files because they already exist on the CLC Web server in a protected folder and students do not have access to it (see the Perl installation instructions steps 28 and 33).
