

Tutorial 8: *Designing Rollovers and Slide Shows*

Textbook Corrections

1. Page JVS 469

The second paragraph makes the impression that it's fine to create thumbnails by reducing the values for the `` tag's width and height properties. False! It is always best to create the second separate thumbnail image using a graphics program. MS Paint is just one of many programs that can be used to create thumbnails. You should always look for ways to make your web pages download faster. Separate smaller images will always download faster.
