

Tutorial 1: *Programming with JavaScript*

Upload Problems

Problem:

You uploaded your *Tutorial 1* to the CLC Web server using an FTP client, but can't view it from your home page on the CLC Web Server.

Cause 1:

The uploaded *Tutorial 1* folders and files are in the wrong locations.

Here is an example of an incorrect folder structure on the CLC Web server. In this example the child folder named **tutorial** is missing.

```
tutorial.01
  mpl.htm
  mpl.jpg
  mplstyles.css
  spam.js
```

Here is an example of a correct folder structure on the CLC Web server but incorrect Web page location. The Web page named **mpl.htm** should be in the folder named **tutorial** (all of the files should be located inside of the folder named **tutorial**).

```
tutorial.01
  mpl.htm
  tutorial
    mpl.jpg
    mplstyles.css
    spam.js
```

Solution 1:

1. Make sure that **mpl.htm**, **mpl.jpg**, **mplstyles.css**, and **spam.js** are located in the `/cit170/tutorial.01/data_files/tutorial/` folder on your home computer or flash drive.
2. Next, delete the Tutorial 1 **tutorial** folder on the CLC Web server.
3. Finally re-upload the Tutorial 1 **tutorial** folder from your home computer or flash drive to the CLC Web server (see the last page of this document for a screen shot of the FTP client upload).
4. The folder and file structure on the CLC Web server should now match the following:

```
tutorial.01
  tutorial
    mpl.htm
    mpl.jpg
    mplstyles.css
    spam.js
```

5. After you re-upload the *Tutorial 1* folders you can check if you did it right by visiting <http://www.clcwebserver.com/student#/> and click on the *Tutorial 1* hyperlink.

Cause 2:

The uploaded *Tutorial 1* Web page file extension is incorrect.

Here is an example of an incorrect Web page file extension on the CLC Web server. In this example the Web page has an incorrect **.html** file extension.

```
tutorial.01
tutorial
  mpl.html
  mpl.jpg
  mplstyles.css
  spam.js
```

In this class, CIT 171 *Web Page Scripting*, use the **.htm** Web page filename extension exclusively. Don't use the **.html** Web page filename extension in any of the tutorials.

If you use the **.html** filename extension the hyperlinks in the tutorial Web pages on your computer won't function, and the hyperlinks on your CLC Web server home page won't function either.

Solution 2:

You will need to rename the Web page named **mpl.html** to **mpl.htm** on both your computer and CLC Web server.

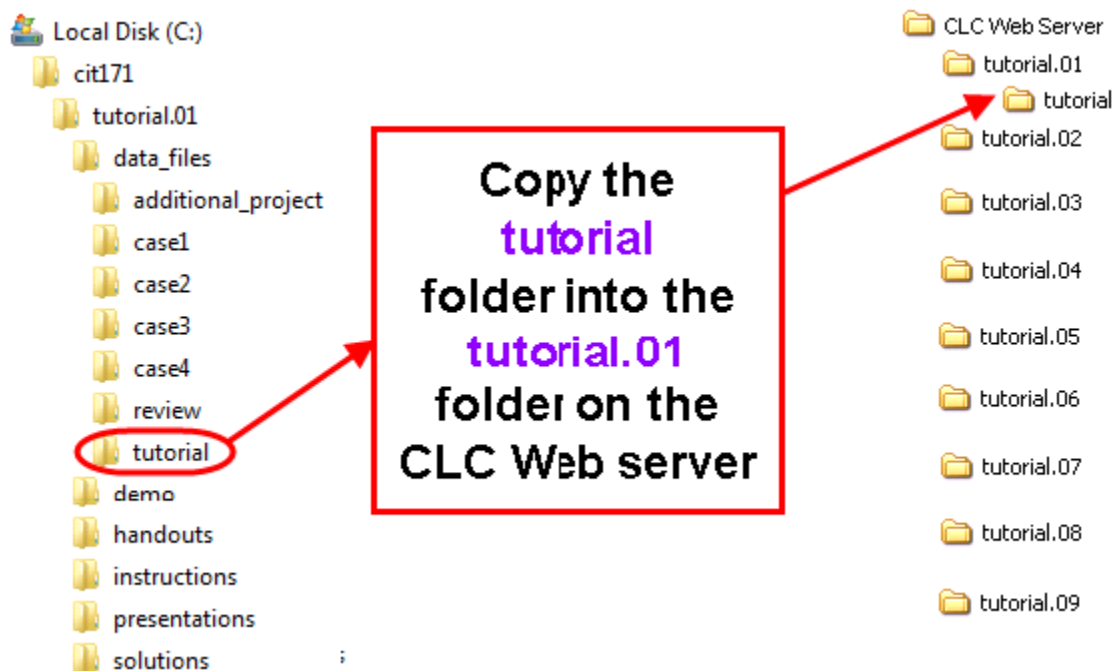

The folder and file structure on the CLC Web server should now match the following:

```
tutorial.01
tutorial
  mpl.htm
  mpl.jpg
  mplstyles.css
  spam.js
```

Important: The Web page must be named **mpl.htm**. It cannot be named **mpl.html**, **Mpl.htm**, **Mpl.html**, **Mpl.htm**, **Mpl.html**, **MPL.HTM**, or **MPL.HTML**. If you name the file something other than **mpl.htm** you will not be able to view your Web page from your home page on the CLC Web server.

Important: Web page file names and folder names are always lower case and never contain spaces. If any of your folder or file names have upper case letters your tutorial Web pages will not display on the CLC Web server.

Folder structure on your home computer and the CLC Web server:
