Tutorial 3: *Working with Arrays, Loops, and Conditional Statements*

Textbook Corrections

1. **Page JVS 115**

   At the bottom of the page, the authors erroneously state that `weekDay[5]` returns the text string Sun. Instead `weekDay[5]` returns the text string Mon. To return the text string Sun, you would need to use `weekDay[6]`.

2. **Page JVS 124**

   There is a typo on the bottom of page 124 step #2 in the brown box that causes the JavaScript function named "writeDayNames()" to fail.

   The offending code is highlighted in yellow:

   ```
   document.write("<th class='calendar_weekdays'> " + dayName[i] + "</"</th>");
   ```

   Here is what the code should look like:

   ```
   document.write("<th class='calendar_weekdays'> " + dayName[i] + "</th>");
   ```

   The error is displayed as corrected on the following page, 125.

3. **Page JVS 146**

   The code that appears on the bottom of this page should be (corrections shown in blue text):

   ```
   outer_loop:
   for( i = 1; i < 4; i++) {
      document.write("<br />" + "outer " + i + ": ");
      inner_loop:
      for (j = 1; j < 4; j++) {
         document.write("inner " + j + " ");
         if(j == i) {
            continue outer_loop;
         }
      }
   }
   ```
